

TireMinder® Wins Gold In The Reader's Choice Awards

January, 2012

Minder Research, Inc. of Stuart, Florida announced today that they received top honors in the category of "Tire Monitoring" for the TireMinder® Tire Pressure Monitoring System (TPMS.) According to MotorHome Magazine, "Tires don't always behave but TireMinder's digital monitor helps you keep an extra eye on them."

Over 130,000 votes were cast in the first ever Readers' Choice Awards among 24 categories and over 100 brands. "We are thrilled to have our customers confirm that we are the number one Tire Pressure Monitoring System in North America," said Debbie Druien, President of Minder Research. "Tire pressure is serious business, and the more wheels you have, the more important a good TPMS is for staying 'Safe on the Road.'™"

Specifically designed for RVs, 5th wheels and motor homes, the TireMinder® 400 Series TPMS continuously monitor tire pressure and temperature offering both visual AND audible warnings if a tire's pressure drops or if the temperature exceeds 167°F (**blow-out warnings.**)

The TMG400 Series has a range of 0 to 145 psi, and includes four or six compact, lightweight pressure/temperature transmitters which screw directly on to the valve stems. The TireMinder® TPMS transmitters have *replaceable* lithium batteries with an average one year battery life. Extra transmitters can be added to monitor up to 22 wheels.
